Drying Systems Catalog

Continuous Mixed-Flow Tower Dryers & Grain Cooling

TD Series Tower Dryers

- Continuous mixed-flow drying delivers uniform moisture reduction with low cracking and high thermal efficiency. Capacities from 10 to 100+ t/h of paddy, maize, wheat and soybean.

Key Features

- Stainless / galvanized drying columns with self-cleaning mixed flow.
- Multi-fuel burners: diesel, natural gas, LPG, biomass pellets.
- PLC + touchscreen with target-moisture shutoff and alarm logging.
- Optional heat recovery and grain cooling sections.

Cooling & Conditioning

- Counter-flow cooling columns stabilise temperature before storage, protecting bin air flow and preventing condensation at the roof.

Selection Guide

- Choose dryer size from harvest throughput, initial/final moisture and available duty hours. Manxing engineers size burners, fans and elevators for a balanced plant.
